

Making Technology Work For Your Business

Who are we?

VB Consulting is a partnership of experienced and innovative technology advisors specializing in needs assessment, purchasing assistance, network installation & design, client standardizing, personalized user training and web site & custom application development.

We utilize our technical expertise and business savvy to engineer the most efficient and cost-effective means to improve your productivity and increase your profits. Keeping your network up and running smoothly is more crucial than ever before. With an ever greater dependence on such features as email, E-commerce and whatever future E-innovations may develop, downtime can no longer be tolerated. If you're looking for experts in the field who will help you realize your business technology potential, quickly and professionally solve any problems you may encounter along the way, and keep your network up and running week in and week out ... we're the ones!

Managed IT Services

Is your IT environment as efficient as it can be? Are you able to identify the causes of inefficient systems management and apply an effective solution?

Every year, as the demands on your IT group increases, how will you respond to change with limited resources and shrinking budgets? Employees, customers and management depend on you to deliver efficient IT services throughout your business.

How will you do it all AND be innovative at the same time? If you're too busy patching, fixing and updating, it's hard to focus on new ideas.

With VB Consulting Managed Services, you can:

- Eliminate the daily strain of IT service delivery
- Automate daily IT tasks
- Manage servers, workstations and mobile devices from one location
- Increase the security of your IT environment
- Minimize the challenges of maintaining compliance by automating IT tasks.

From remote access to remote support to complete IT automation, VB Consulting's managed services provide solutions for IT environments of all sizes.

Technology Planning

It can be difficult for business owners to set aside dedicated time for technology planning. Spending a few hours with one of our expert consultants will save you weeks of research on your own, and will prepare your business for the future.

VB Consulting offers IT assessments and technology planning to help you get the systems you need to grow your business.

Our technology planning services include:

- IT architecture design & review
- Cost/Benefit analysis and ROI studies
- Project requirements definition
- Procurement planning
- Co-location studies and negotiations
- Telecommunication studies
- Technology research

Email and Web Hosting

Our Standard Email and Website Hosting plan provides you with a reliable website presence and as many as email accounts as you need.

- POP3, IMAP and SMTP accounts
- Web-Based Administration
- Domain Registration
- Junk Mail Filtering
- Web Mail Access
- Emergency Mail
- Virus Scanning

On-Site Training and Support

If you or your employees have never set up a computer before, fear not. We can get you up and running in a relaxed and pressure-free environment. We will:

- Establish your computer's initial settings
- Install your software
- Configure Internet access

Making Technology Work For Your Business

Voice and Data Services

The architecture of your voice and data network is critical to the ongoing success of your business. Selecting, installing and configuring the right communications systems to support your business goals is no easy task. With so many choices and options available, making the right decision can be exhausting.

We know you don't have time to sort through all of the options, but we do. Our team has the knowledge and experience to match the right systems to your business.

We'll recommend the most effective solution, help you get it up and running and stand behind it as you continue to grow.

Network Planning, Installation and Maintenance

With over 20 years of experience in the Information Technology industry, VB Consulting is aware of the needs customers have in making important technical decisions. We can help you design and architect the network environment that fits your company's needs and that has room for growth. Here are just a few of our network design services:

- Network architecture and deployment
- Disaster recovery and planning
- Corporate messaging solutions
- Remote network management
- Voice and data cabling
- Data center integration
- Security and auditing
- Technology upgrades
- Project management

We also provide expert installation and ongoing system maintenance. It's the perfect solution for a business without an IT department or limited IT support.
